

**SCALPTOOL**  
Advanced trading platform

## THE PLATFORM FROM TRADERS TO TRADERS

ScalpTool is the most innovative system of the last years for financial trading and scalping on stock market and derivatives. It allows to make market analysis as no other platform does and it provides information on the book, which is comparable only to the most sophisticated institutional applications.

ScalpTool was born in 2002 thanks to euSpeed founder and famous Italian scalper Roberto Vernaleone. With his long operational experience and his deep study of stock market and derivatives, he led ScalpTool to be well appreciated not only by institutional customers and professional Italian traders, but also to be the first software for aggressive scalping in the US market.

### KEY FEATURES

- **Time & Sales Mani Forti:** this is the function aimed to observing big investors and their information on trends and levels.
- **Time & Sales Classic/Advanced 1/Advanced 2:** for every kind of Time & Sales we have different analysis on MF (Mani Forti) and on Trend Mani Forti, because the filter is performed on data processed by Time & Sales.

Traders who tried ScalpTool  
defined it an incredible  
war machine

- **Buy & Sell:** this indicator calculates whether Buy have been more than Sell or vice versa in a defined time frame. This indicator represents the Buy/Sell difference, considering the presence of iceberg orders as important playing forces.
- **Orders priority:** thanks to this feature, traders can better understand and handle the order priority in the market. It allows to verify the orders size that have been entered before and after an order and check better the quality of order position on book.
- **Vertical book:** nobody has ever dared so much! Our vertical book is unique and appreciated by the most qualified scalpers, not only in Italy, for its full information, the immediacy of operating references and for its dynamism in the orders management. Our book is the essence of scalping!
- **Simulation:** ScalpTool can offer to traders this important tool of analysis. Priorities, order delays and many more details are perfectly faithful to reality and may be set up by users.
- **Review:** this is a system to distribute the historical data flows. Through this function traders have the chance to live the market again in all its aspects and as it happened in real time. This feature allows users to try the MarketQuotes and/or their strategy with operational simulation also when market are closed.  
Simulation reflects exactly all market priorities and difficulties.

ScalpTool Vertical book is the  
scalping soul.

- **Iceberg orders indicator:** ScalpTool is able to identify the presence of Iceberg orders and their importance in real time. To understand immediately if a level contains iceberg order guarantees a prompt analysis and possible amendments.

## ADDITIONAL MODULES

- **MarketQuotes:** it is the semiautomatic quotation system, helping to understand the market accelerations and react to them. Main feature of this module is the capability to handle and quote not only static orders but also conditional ones.
- **MarketConn:** it allows to modules and external developed components to face ScalpTool through API (Application Programming Interface). In this way ScalpTool and its functions can be further personalized.

It is possible to add external modules for further personalizations.
